

Name: _____

Trait Approach: Chapter 7

Across

4. Dimension used to categorize people according to the degree in which they manifest their characteristics
7. One of the Big 5 associated with trust and helpfulness
12. Apathetic
13. Published "Personality Traits: Their Classification and Measurement" (Fill in surname only)
15. Typically, most psychologists agree that both the person and the _____ interact to determine behaviour
16. His approach was a blend of psychoanalytic and trait concepts
18. "_____ variance" are individual differences in behaviour
20. In the idiographic approach the _____, not the researcher, determines what traits are to be examined
23. No schools of _____ have originated from the Trait Approach
25. Single trait that will occasionally dominate a personality

26. First attempts to describe and identify personality

27. Trait psychologists are said to be this rather than practicing therapists

28. One of the Big 5 associated with how an individual reacts to experience

29. Social _____ is the response tendency in which a test taker may present themselves favourably

30. Needs described as "readiness to respond in a certain way under given conditions"

Down

1. Whether the need is activated depends on the _____

2. Problem that may arise in self-reports if the test taker is bored with long tests or may fail to understand

3. One of the Big 5 that may best predict job performance

5. Unlike Freudians and Neo-Freudians, Trait Theorists used _____ measures to examine their constructs

6. A weakness in Trait Theory is that trait psychologists do not explain how traits _____

8. One of the Big 5 associated with an individual's sociability

9. This approach assumes individuals can be measured along a single dimension

10. Temperamental

11. Agreement response that is problematic in self-report scales

14. Cattell specifically allowed for _____ to determine the theory

17. Prototypic self-report inventory used by clinical psychologists (abbreviation)

19. Chemist that employed a statistical technique in personality theory

21. Alternative to one-item measurements researchers do to data

22. _____ Analysis is a statistical procedure used to determine the number of dimensions in a data set

24. Unhappy
