Name: _____

Unit 2

Across

1. Two angles that share a common vertex and side are opposite rays

5. Angles outside in opposite sides that are congruent

13. Angles inside two parallel lines and add up to 180 degrees

14. Angles outside of two parallel lines that add up to 180 degrees

Down

2. Two angles that are congruent and one is inside and the other outside in the same side

3. Two angles that the sides form 2 pairs of opposite rays

4. Angles inside and opposite sides that are congruent to each other

6. Used to find the area using the coordinates of the shape

7. A line that intersects two or more lines in the same plane at different points

8. Angles that measure up to 90 degrees

9. Angles that measure up to 180 degrees

10. 2 angles that equal the same

11. Two segments that are congruent

12. Tells if two sides are congruent

Word Bank

Supplementary | Parallel lines | Complementary | Corresponding

Vertical angles | Linear pair | Same side exterior | Alternate exterior

Transversal | Shoelace method | Tik marks | Same side interior

Congruent | Alternate interior
