

# Unit 2 Angles & Measurements

## **Across**

- 6.** Sum of angle measures is 180 degrees  
**8.** are inside the parallel lines, and on opposite (alternate) sides of the transversal  
**9.** Have the same vertex and share a common side but no interior points  
**10.** two nonadjacent angles that lie on the same side of the transversal  
**11.** Sum of angle measures is 90 degrees

**13.** Nonadjacent angles formed by two intersecting lines; (they are congruent)

**14.** A line meeting another at a right angle

**15.** Two angles on the same side of transversal and outside the parallel lines equal 180 degrees

## **Down**

**1.** two nonadjacent exterior angles that lie on opposite sides of the transversal

**2.** Adjacent angles whose noncommon sides are opposite rays

**3.** Equal in measurements

**4.** A line that intersects two or more coplanar lines at different points

**5.** lie on the same side of the transversal and on the interior of the lines

**7.** point where two rays intersect

**12.** two lines that are always the same distance apart and never touch
