

Unit 8 Vocabulary Test

Across

- 3. Lines that lie in the same plane, never intersect, and are always the same distance apart.
- 10. Angles that are inside of a triangle, formed by two sides of the triangle.
- 11. In a right triangle, the sides that include the right angle; in an isosceles triangle, the pair of congruent sides.
- 12. Angles that are outside of a triangle between one side of a triangle and the extension of the adjacent side.

- 13. The measure of an angle where each degree represents 1/360 of a circle.
- 14. Lines that cross at exactly one point
- 15. Two angles whose measures add up to 90°.

Down

- 1. Lines that intersect to form right angles.
- 2. A pair of non-adjacent, non-overlapping angles formed by two intersecting lines creating angles that are opposite and congruent to each other.
- 4. If two angles in one triangle and congruent to two angles in another triangle then the measures of the third angle in both triangles are congruent.
- 5. Two Angles whose sum measures have a sum of 180°.
- 6. Angles in the same plane that have a common vertex and a common side.
- 7. A triangle with one right angle (exactly 90°) and two acute angles.
- 8. In a right triangle, the side opposite the right angle. It will always be the longest side.
- 9. A line that intersects two or more lines.
