Urinary Tract Review

Across

- 2.** Pyramidal shaped regions in the kidney encompassed by the renal cortex
- 8.** The artery that supplies the lower urinary tract
- 10.** The microscopic, functional unit of the kidney
- 11.** The shape of the kidneys in cattle
- 13.** Slits in the trigone that lead to the urethra
- 15.** The outermost layer of the kidney
- 17.** The kidney that has the most cranial placement

- 18.** The part of the kidney that funnels urine into the ureter

- 20.** Surrounds and holds the kidney in place

Down

- 1.** A small tube that connects to the bladder and drains urine from the body
- 3.** The tubes that connect each kidney to the urinary bladder
- 4.** The internal triangular region of the bladder that funnels urine into the urethra
- 5.** Long tube-like extensions in horses that carry urine to the renal pelvis
- 6.** Type of epithelium found in the bladder

- 7.** The paired functional organ of the urinary system

- 9.** The branch of the abdominal aorta that delivers blood to the kidney

- 12.** Part of the female reproductive and urinary tracts that extends from the urethral opening to the outer genitalia

- 14.** The areas in the kidney where the renal vein, artery, and ureter connects

- 16.** Layer of the kidney deep to the capsule. Contains renal corpuscles and convoluted parts of renal tubules

- 19.** This species has kidneys at equal levels and no renal crest
