Validity vs. Reliability

Across

2. What is the statistical procedure the measures the strength of a particular scale or index
6. What problem occurs when two researchers interview the same subject but get different results or responses?
8. A measure of internal consistency is _____ reliability
9. What is it called when one variable "moves," and so does the other?
10. The ability to consistently reproduce the same results under similar research conditions; the repeatability of findings and measures or measurement consistency

Down

1. What occurs when two identical measure are taken on two separate occasions and the results are the same?
3. _____ - _____ reliability is measured when researcher subjects are given slightly different questions, or measures, of the same concept.
4. The ability to accurately measure what one is intending to measure.
5. What is the first threat to validity?
7. _____ validity is concerned with how well the study findings are "generalizable" to other people, places, and times.
