# Viruses and Biotechnology

## Across

- 2. an infectious particle consisting of just genes packaged in a protein coat
- 6. the protein coat enclosing the viruses genes
- 8. small DNA molecules that replicate separately from the bacterial chromosome

9. a general outbreak of a disease

- 10. introducing genes into a person for therapeutic reasons
- 11. transmission from an external source
- 12. virus that suddenly becomes apparent

## Down

- 1. RNA animal viruses that have an enzyme that transcribes RNA into DNA
- 3. transmission passed down from another plant
- 4. viruses that infect bacteria
- 5. a global epidemic
- 7. a limited number of species a virus can infect
