# Vocab for photosynthesis

## Across

6. First set of reactions in cellular respiration in which a molecule of glucose is broken into two molecules of pyruvic acid  
 7. Process that requires oxygen  
 8. Set of reactions in photosynthesis that do not require light. Also called the Calvin Cycle  
 9. Process that releases energy by breaking down glucose and other food molecules in the presence of oxygen  
 10. Light-absorbing molecule used by plants to gather the sun's energy

11. Process used by plants and other autotrophs to capture light energy and use it to power chemical reactions that convert carbon dioxide and water into oxygen and energy-rich carbohydrates such as sugars and starches  
 12. Set of reactions in photosynthesis that use energy from light to produce ATP and NADPH  
 13. Second stage of cellular respiration in which pyruvic acid is broken down into carbon dioxide in a series of energy-extracting reactions

## Down

1. Principal pigment of plants and other photosynthetic organisms  
 2. Process that does not require oxygen  
 3. Compound used by cells to store and release energy  
 4. Process by which cells release energy in the absence of oxygen  
 5. Organelle found in cells of plants and some other organisms that captures the energy from sunlight and converts it into chemical energy
