

Vocabulary 11

Across

- 2. Is the preserved evidence of the activity of an organism.
- 3. Body parts that perform a similar function but differ in structure
- 6. A person who studies plants and animals by observing them.
- 8. An adaptation that enables a species to blend in with its environment.
- 10. The study of similarities and differences among structure of living species.
- 11. Body parts of organisms that are similar in structure and position, but different in functions.

15. A fossil copy of an organism in a rock.

- 16. The resemblance of one species to another species.
- 17. Made up of all the fossils ever discovered on earth.
- 18. The change over time in population of related organism.

Down

- 1. The process by which populations of organisms with variations that help them survive in their environment live longer, compete better, and reproduce more than those that have the variations.

4. Body parts that have lost their original function through evolution.

- 5. A chart that divides earth's history into different time units.
- 7. The breeding of organisms for desired characteristics.
- 9. An inherited trait that increases an organism's chance of surviving and reproducing in its environment.
- 12. The impression of an organism on a rock.
- 13. A slight difference in an inherited trait of individual members of a species.
- 14. Occurs when the last individual organism of a species dies.
