

# Vocabulary Activity

**Across**

- 9.** Demonstrated by infants who comfortably explore environments in the presence of their caregiver, show only temporary distress when the caregiver leaves, and find comfort in the caregiver's return.  
**10.** A person's characteristic emotional reactivity and intensity.

**Down**

- 1.** Demonstrated by infants who display either a clinging, anxious attachment or an avoidant attachment that resists closeness.  
**2.** A procedure for studying child-caregiver attachment; a child is placed in an unfamiliar environment while the caregiver leaves and then returns, and the child's reactions are observed.  
**3.** The fear of strangers that infants commonly display, beginning about 8 months of age.

- 4.** All our thoughts and feelings about ourselves in answer to the question, "Who am I?"

- 5.** According to Erik Erickson, a sense that the world is predictable and trustworthy; said to be formed during infancy by appropriate experiences with responsive caregivers.  
**6.** An emotional tie with another person; shown in young children by their seeking closeness to their caregiver and showing distress on separation.  
**7.** The process by which certain animals form strong attachments during early life.  
**8.** An optimal period early in the life of an organism when exposure to certain stimuli or experiences produces normal development
