# Vocabulary

Across

2. A Shape That all three internal angles are also congruent to each other and are each 60°

3. Smaller angle. It is more than 90° and less than 180°.

5. 2-dimensional shape formed with straight lines.

6. A polygon with four edges (or sides) and four vertices or corners.

8. Lines that are at right angles (90°) to each other.

13. A straight one-dimensional figure having no thickness and extending infinitely in both directions.

15. A Line with a Single Endpoint

17. Two angles that have a common vertex and a common side

18. A triangle that has three unequal sides,

19. A triangle that has two sides of equal length

20. Either of two angles whose sum is 90°.

Down

1. A Smaller Angle That don't s more than 90° and less than 180°

4. A Line That never intersect

7. A 4-sided flat shape with straight sides that has a pair of opposite sides parallel.

9. An angle of 180 Degrees

10. A angle between a side of a rectilinear figure and an adjacent side extended outward.

11. Polygon with all its interior angles less than 180°.

12. 4 sides that is the same length and are parallel to each other.

14. A Shape That is made up of three lines and three angles

16. A part of a line that is bounded by two distinct end points, and contains every point on the line between its endpoints.

Word Bank

Obtuse angle	Trapezoid	Parallel lines	Scalene triangle
Quadrilateral	Adjacent angles	Obtuse triangle	Equilateral triangle
Straight angle	Segment	Square	Isosceles triangle
Line	Convex polygon	Ray	Polygon
Exterior angle	Triangle	Perpendicular lines	Complementary angles
