

# Volcanoes and Earthquakes

## **Across**

- 2.** How to measure how thick and sticky a liquid is?
- 7.** What is the energy called when it travels away from the focus of the earthquake?
- 9.** What is the measurement of earthquake strength based on seismic waves?
- 10.** What fault is it when the hanging wall drops down?
- 11.** What is the name of the stress that pushes together?

## **Down**

- 1.** What is the point on Earth's surface that is directly above where the earthquake originates?
- 3.** What is the earthquake's underground point of origin?
- 4.** Where do volcanoes form?
- 5.** What type of volcano is formed when basaltic lava flows long distances before hardening.
- 6.** What is it called when a large crater-shaped basin forms when the top of a volcano collapses?
- 8.** Where do earthquakes usually occur?
