

Water Cycle

Across

7. A rock layer that stores and allows the flow of ground water

8. water that is soaked into the ground

9. the force that brings precipitation to the ground

10. the process by which water vapor is released from the leaves of plants into the atmosphere

12. When water falls back to the Earth in streams, rivers, lakes, oceans, etc.

Down

1. Water in the form of gas

2. the changing of water from a liquid to a gas

3. the changing of water from a gas to a liquid

4. Process by which water molecules fall to the Earth's surface

5. Evidence of condensation

6. precipitation that flows over the ground to streams, rivers, and oceans

11. The driving force behind the water cycle
