

# Water Properties

## Across

2. The element that is partially negative in a water molecule
5. A solute that doesn't dissolve in water
9. Sticks to other molecules
14. Hogs electrons
15. The bond that keeps the hydrogen and oxygen together
16. What forms a strong bond between water molecules nearest to the air and the other water molecules around them
17. Water is a good \_\_\_\_\_ for polar substances/molecules

## Down

1. The element that is partially positive in a water molecule
3. The amount of energy it takes to raise one gram of water one degrees celsius
4. Water has a \_\_\_\_\_ heat capacity
6. The bond that connects water molecules to each other
7. Another word for dissolve or space evenly
8. A solute that dissolves in water
10. A mixture of a solvent and a solute

11. To dissolve in water a solute must be
12. Water molecules are attracted to the most \_\_\_\_\_ thing around them
13. Sticks to each other through hydrogen bonds
