

Name: _____

Date: _____

Water

Across

3. Water that flows along the ground that is not absorbed because either the soil is saturated or the surface is impervious.
6. Water that flows along roads and other paved areas that carries pollutants into storm drains.
7. Water that is safe for drinking.

8. A surface that prevents water from soaking or seeping through it.
10. An underground source of water.
11. Water that is added to soil to help grow crops when there is not enough rain.
12. Using water in a way that helps ensure future water needs are met and its quality is protected.

Down

1. The use of 60% of Canada's water.
2. Using less water by reducing waste.
4. Also known as the water cycle.
5. An area of land where all the water within it flows into a particular river or set of rivers.
9. Water in any form of solid, liquid, or gas that falls to Earth.
