## Waves

## Across

3. the distance between the adjacent crests or compressions in a series of waves
4. speed at whcih a wave travels
5. bending waves around a barrier or through an opening
6. wave that forms from a stationary pattern in which portions of the waveare at rest position 13. matter that transmits light but also scatters the light as it passes through matter
7. image through which light passes
8. any disturbance that transmits energy through matter or space 19. mirror that is curved inward 20. the point on the axis of a mirror lens throughwhich all incident light rays are focused

## Down

1. number of waves produced in a given amount of time 2. the distance between a mirror lense through which all incident parallel rays are focused
2. image through which light does not actually pass
3. mirror with a flat surface
4. occurs when a wave bounces back after striking an object 9. lens that is thicker in the middle than the edges
5. result of more moves overlapping
6. curved transparent object that forms an image by refracting light
7. maximum distance the wave vibrates from the rest position
8. mirror that is curved outward
9. matter through which visible light is easily transmitted
