

Weather Vocab V3

Across

- 10. an instrument measuring atmospheric pressure, used especially in forecasting the weather and determining altitude.
- 11. a line on a map connecting points having the same atmospheric pressure at a given time or on average over a given period.
- 13. the boundary of an advancing mass of warm air, in particular the leading edge of the warm sector of a low-pressure system.
- 14. a boundary separating two masses of air of different densities
- 15. a hygrometer consisting of a wet-bulb and a dry-bulb thermometer, the difference in the two thermometer readings being used to determine atmospheric humidity.

Down

- 1. a radar tracking system using the Doppler effect to determine the location and velocity of a storm, clouds, precipitation, etc.
- 2. the branch of science concerned with the processes and phenomena of the atmosphere, especially as a means of forecasting the weather.
- 3. an instrument for measuring the speed of the wind, or of any current of gas.
- 4. the boundary of an advancing mass of cold air, in particular the trailing edge of the warm sector of a low-pressure system.
- 5. a boundary between two different air masses, neither of which is strong enough to replace the other.

- 6. a composite front produced by occlusion.
- 7. an instrument for measuring and indicating temperature
- 8. an artificial body placed in orbit around the earth or moon or another planet in order to collect information or for communication.
- 9. a body of air with horizontally uniform temperature, humidity, and pressure.
- 12. a line on a map connecting points having the same temperature at a given time or on average over a given period.
