

Name: _____

Date: _____

Weather project

Across

2. an instrument measuring atmospheric pressure used especially in forecasting the weather and determining altitude
3. The zone separating two air masses of which the cooler denser mass is advancing and replacing the warmer
7. a body of air covering a relatively wide area exhibiting approximately uniform properties through any horizontal section
8. the amount of moisture in the air
9. the continuous process by which water moves from Earth's surface to the atmosphere and back

10. a transition zone between a mass of warm air and the colder air it is replacing.

Down

1. a front between warm and cold air masses that is moving very slowly or not at all.
4. a composite front formed when a cold front overtakes a warm front and forces it aloft.
5. the horizontal movement of air from an area of high pressure to an area of lower pressure
6. The condition of Earth's atmosphere at a particular time and place
