

Weathering, Erosion, and Deposition

Across

- 7. A current that flows parallel to the shoreline
- 11. The rapid downhill movement of soil, loose rocks, and boulders
- 12. A crumbly, windblown deposit of silt and clay
- 13. A large mass of ice that forms on land and moves slowly across earth's surface
- 14. The grinding away of rock or other surfaces as particles carried by wind, water, and ice scrape against them

- 15. A mixture of various sizes of sediment deposited by glaciers

Down

- 1. The removal of weathered material from one location to another
- 2. A pile of angular rocks and sediment from a rockfall
- 3. A pile of windblown sand
- 4. A mound or ridge of sediment deposited by glaciers
- 5. A layered sediment deposited by streams of water that flow from melting glaciers

- 6. A broad, C-shaped curve in a stream
- 8. A large deposit of sediment that forms where a stream enters a large body of water
- 9. The laying down or settling of eroded material
- 10. The downhill movement of a large mass of rocks and soil because of gravity
