

Weathering

Across

3. A deposit of silt or materials brought by wind
6. Agent that pulls objects towards the center of the earth
8. Created by several layers of sediment deposited by flooding waters
9. When acids fall to earth
10. Sudden and rapid movement of large material down a slope
11. Rapid movement of a large mass of mud

Down

1. Dropping or depositing of sediments by gravity, water, wind or ice
2. Happens when loose rocks fall down steep slope
4. Extremely slow movement of materials down a slope
5. Breaking down and wearing away of rock material by the mechanical action of other rock
7. Movement of sediment and soil due to wind, gravity, ice or water
