

# What's the weather like today?

## Across

2. a large geographical region with a defined range of temperature and precipitation.  
 7. an abiotic component of the atmosphere.  
 8. the annual average of total incoming solar radiation.  
 12. layer of gases  
 13. this cost is lower in less developed countries.  
 14. is affected by latitude, elevation, air masses, and nearness to a body of water.  
 15. a prolonged period of excessively hot weather.

16. a group of people that have a distinctive way of life and economic system.  
 17. a thin layer of the Earth that is able to support life.  
 18. forces surface air that is moving toward the equator, from east to west.  
 19. radiation is converted into this in everything it touches.  
 20. a cycle due to which water vapor is uncontrollable, unlike other gases.

## Down

1. a place where the loss of glacial runoff is a major issue.

3. the difference between incoming and outgoing radiation.  
 4. the movement of particles from one location to another.  
 5. the GHG that traps the most amounts of infrared radiation than other GHGs.  
 6. all the water on Earth.  
 9. they are carbon sinks.  
 10. the study of humans past and present.  
 11. the biome which contains all water bodies.
