# Year 10 Glossary

## Across

4. Describes specific areas of the Earth's surface and how they are used. Gives space meaning.
7. Refers to how the Earth alters over time. Change in both time and space allows geographers to examine how environments develop, transform or disappear.
8. Refers to the on going capacity of the Earth to maintain all life.
9. Description of a particular space.
10. Is a large area on the Earth's surface that is defined by the types of animals and plants living there. It can also be partially defined by local climate.

## Down

1. The shapes and patterns in which things are arranged on the Earth's surface.
2. Events occur at levels such as, local, regional, national, and international or global. Scale can be large 1:1 covering a small area or small 1:100.000 covering a large area.
3. Refers to the links that exist between components of the environment. e.g. hot dry climates will be linked to drought tolerant plants.
5. Refers to the surroundings of conditions in which people, plants and animals live.
6. Refers to how things are arranged on Earth. The world is organised spatially. i.e. location, distribution and pattern.
