

Name: _____

Date: _____

Year 10 science quiz of the year

Across

2. Process that converts light energy to chemical energy
5. Chemical messenger found in the blood
9. Lightest noble gas atom
10. Special property of Iron, Nickel and Cobalt
14. What are proteins made from ?
16. Unit of energy
18. What does an unopposed force acting on an object produce ?
19. Ribosomes synthesise these

21. When gases are exchanged in the lungs

23. Green coloured halogen gas

24. Using electricity to separate elements from a compound

Down

1. Bonding between a metal and a non-metal

3. Used to measure current

4. Genetic material

6. Movement of water across a semi-permeable membrane

7. Silver coloured element in group 2

8. Enzyme found in saliva

11. What is a biological catalyst called ?

12. Process of gas changing into a liquid

13. Not acidic

15. Middle colour of the visible spectrum

17. When the body breakdown large food molecules

20. This needs to be complete for a current to flow

22. Yellow coloured unreactive metal
