

Unit 5 Math Vocabulary

Across

- 2. Any function that graphs straight line.
- 5. A pair of numbers used to locate points on the coordinate plane.
- 12. To find the value of variables that makes an equation true.
- 13. A combination of symbols, operators, numbers, and/or variables without using equal signs or inequality signs.
- 15. A decimal that stops or ends.
- 16. A whole number that can be negative, positive, or zero.

- 17. The rate of change
- 18. A decimal which has one or more digits recurring.
- 19. A statement which shows the equality of two expressions separated by an equal sign.
- 20. An equation written in the form of $Ax + By = C$.

Down

- 1. When the slope of the line decreases.
- 3. An equation written in the form of $y = mx + b$.
- 4. When the slope of the line forms a horizontal line.
- 6. When the slope of the line forms a vertical line.
- 7. When the slope of the line increases.
- 8. to find the value of a numerical or algebraic expression
- 9. Any function which doesn't graph a straight line.
- 10. Any set of ordered pairs.
- 11. Terms which have the say variable and power.
- 14. Putting numbers where the variables are.
