

Weathering and erosion

Across

6. Organisms that breakdown the remains of organisms and I just them

7. Chemical change in which substance combines with oxygen as when iron oxides forming rust

8. Rock is physically broken down into smaller pieces

11. Loose weathered material and earth surface in which plants can grow

12. The process by which ice wind water and soil move weather rock

Down

1. The geological principle that the same geologic processes that operate it today in the past to change

2. Breaks down rock with chemical changes

3. Sports rock when water seeped into cracked and freezes and expands

4. Characteristics of material that is full of tiny connected air spaces I can see through

5. The process that breaks down rock and other material at Earth surface

9. Grinding away of rocks by other rock particles carried in water with ice or wind

10. Dark colored organic material in soil
