

# agents of weathering

**Across**

- 1. changes in temp. will break apart the rock
- 6. blown sand blast small particles away
- 7. landslides cause big rocks to break little rocks
- 9. moving water smooths out the rocks
- 10. grow on rocks and trees and produce small acids
- 11. blank moves through spaces or cracks in rocks, blank in the water can cause rocks to dissolve

**Down**

- 2. blank breaks down minerals faster than water alone
- 3. when animals dig and expose rocks and soil to the surface
- 4. seeds fall in cracks of rocks and grow to break apart the rock
- 5. when pressure decreases it expands the rock
- 8. oxidation is what rocks have with blank
