

chapter 8 volcanoes

Across

5. A large space in the volcano caused by magma melting it out.
8. lava with a smooth, ropey surface.
9. solidified lava with ash, cinders, bombs, and chunks of rock
11. What are vents in the ground where steam and gases from volcanic activity can escape

Down

1. volcanoes made up of lava from quiet eruptions alternating with layers of pyroclastic material

2. an inactive and uneroded volcano
3. A depression at the top of the cone.
4. a mud-flow of volcanic ash and water
6. loose layer of pyroclastic material and ash covering the ground.
7. what is depositional landform built from solidified magma from deep in the earth?
10. What is an opening in the crust from which gases an lava can escape?
