

# geometry

**Across**

- 6. Shape with equal sides and angles
- 9. Has one 90 degree angle
- 12. Points that lie on the same line
- 13. Lie on the same side of the transversal and corresponding positions
- 15. line that goes two ways indefinitely
- 16. Line that intersects the midpoint
- 17. Angles less than 90 degrees

- 18. Interior angles that lie on the same side to the transversal
- 19. Nonadjacent interior angles that lie on opposite side of the transversal
- 20. Two angles that have a sum of 180 degrees

**Down**

- 1. Points that lie on the same line
- 2. Nonadjacent exterior angles that lie on opposite side of the transversal
- 3. A ruler with no markings on it

- 4. Three equal sides and angles
- 5. Flat surface, has capital letters, can be named by points
- 7. Two angles with the sum of 90 degrees
- 8. Divides line into two equal parts
- 10. Same slope, do not meet
- 11. To make circle and parts of circles called arcs
- 14. Consists of one endpoint and goes one direction the other way
