## geometry terms

## **Across**

- 4. a position in space
- 7. a triangle having three unequal sides and angles
- **9.** Line Segments that intersect (cross) at an angle of 90°
- **10.** line segments that cross each other
- **12.** An angle that measures more than 90°
- **13.** a quadrilateral having both pairs of opposite sides parallel to each other

**14.** the line segment between two points on a given curve

## **Down**

- **1.** line segments that do not intersect
- **2.** a polygon having six sides and six angles
- **3.** a straight line passing through the center of a circle or sphere and meeting the circumference or surface at each end
- **5.** a continuous extent of length

- **6.** a straight line extending from the center of a circle or sphere to the circumference or surface
- **8.** the intersection point of two sides of a plane figure
- **11.** a curve that is continuous and has endpoints that meet at the same point
