

Name: _____

Date: _____

monomer liquid and polymer powder nail enhancements

Across

- 4. also known as curing or hardening
- 5. the part of the nail enhancement where the natural nail grows beyond the finger and becomes the free edge
- 8. describes any art that protrudes from the nail
- 10. used as a guide to extend the nail enhancement beyond the fingertip for additional length
- 11. the amount of monomer liquid and polymer powder used to create a bead
- 14. the actual underside of the nail extension
- 15. nail enhancement products that have little odor
- 18. founded in polymer powder

19. powder in white, clear, pink and many other colors that is combined with monomer liquid to form the nail enhancement

21. chemical liquid mixed with polymer powder to form the sculptured nail enhancement

Down

- 1. substance formed by combining many small molecules into very long, chain-like structures
- 2. the line of the nail enhancement that runs straight from the cuticle down the side or wall of the nail to end of the extension
- 3. designs inside a nail enhancement
- 6. used on the natural nail prior to product application to assist in adhesion
- 7. also known as polymerization reaction

- 9. special container that holds monomer liquid and polymer powder
- 12. refers to how many grains of sand are on the file per square inch
- 13. also know as arch; the area of the nail that has all the strength
- 16. a multi sided buffer used to create a high shine on the natural nail or a nail enhancement when no polish will be worn
- 17. the curved line where the pink and white meet each other
- 20. one unit called a molecule
