

Name: _____

muscular system

Across

6. muscles that compresses cheeks inward; whistling or kissing.
7. moves limb toward midline of body
8. a large triangular muscle covering the shoulder joint and serving to abduct and flex and extend and rotate the arm
12. a forceful extensor of the femur
14. attach bone to bone
15. muscles that are the prime mover for the extension of the head, also elevates the scapula to raise the shoulders
16. a protein that, together with actin, is responsible for muscular connection and relaxation (dark protein)
17. decrease angle at a joint

18. increase angle at a joint

22. straight muscles of the abdomen that flexes the trunk
23. the large, broad muscle in the middle and lower back that extends and adducts the humerus and rotates the humerus medially
24. muscles that protrude the lips - whistling and kissing

Down

1. the large, broad muscle in the chest that flexes and adducts the humerus and rotates the humerus medially
2. moves limb away from midline of body
3. muscles that opens mouth lowers mandible

4. muscles that raises eyebrows, wrinkles forehead

5. attach muscle to bone
9. where muscle attaches to a more stationary bone
10. moves insertion downward
11. muscles that opens mouth lowers mandible
13. muscles that elevates mandible and closes jaw - Powerful
19. a protein in a muscle fiber that together with myosin is responsible for contraction and relaxation (light portion)
20. muscle
21. moves insertion upward
25. produces energy for muscles
