

rivers and coasts

Across

1. cycle (only put the missing word)
4. formed as a river that cuts down through the landscape; the river channel winds through the hills interlocking spurs
10. the material a river carries
13. where the river flows
15. when a river loses energy, it will drop or deposit some of the material it is carrying

16. formed as water flows over the river banks during a flood. heavy sediment is deposited on the river banks so that they rise up above the level of the river

17. where the river meets the sea
18. the movement of sediment down a river channel

Down

2. water heated by the sun becomes water vapour
3. an overflow of a large amount of water beyond its normal limits
5. a burst of very heavy rain may cause...

6. the point at which two rivers meet

7. sand grains and small stones just bounce along. (hint-apart of 4)
8. rapid flow of water over land when soil is saturated
9. wearing down/removal of material by the water, ice or wind
11. precipitation lands on trees and plants
12. large stones and rocks get rolled along (hint-apart of transportation)
14. where a river begins
