

Name: _____

Date: _____

shapes

Across

3. prisms and pyramids that are three dimensional figures with faces that are polygons
5. polygons that connect with the bases
6. when line segments have the same length or when angles have the same measurement
7. a polygon with seven sides, seven angles, and seven vertices
9. a polyhedron with only one base

10. a figure that is formed by three or more line segments that meet at points called vertices

Down

1. a polygon with nine sides, nine angles, and nine vertices
2. all sides are congruent and all angles are congruent
4. the bottom or top side of a figure
8. a polyhedron that has two congruent polygons with bases
